DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. Figures 21-26 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the examiner does not accept the changes, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Specification

3. The disclosure is objected to because of the following informalities:
 - Page 1: A cross-reference to application PCT/JP03/11783, filed 9/16/2003, must be included as the first sentence of the specification.

Art Unit: 2612

- Page 3, Lines 26 and 31: The two different embodiments of the invention are usually referred to as --embodiments of the invention-- and not "inventions of the application."
- Page 5, Line 25: An article such as --an-- is needed before "embodiment".
Appropriate correction is required.

4. This application is in condition for allowance except for the following formal matters:

As noted above.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

5. The following is a statement of reasons for the indication of allowable subject matter:

Object tilt and fall detection apparatus have had timer means for time measurement for some time; however, the specific components to keep the disk body stationary until time of use is not to be found in the prior art. The cover member having a deformable recessed portion for positioning and storing the disk body and the removable temporary locking pin for restraining movement of the disk body are both considered unobvious variations.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Wilk [U.S. 5,528,228] detects orientation of a storage and transport container.

Hall et al [U.S. 5,554,975] sounds an audible alarm after a time delay.

Zagone et al [U.S. 6,486,788] uses a digital sound chip to alert to dangers such as overhead power wires.

Miseli et al [U.S. 6,727,824] provides a tilt output when a display is tilted beyond a tilt threshold.

Murata [U.S. 7,061,390] uses a magnetized rolling member to detect movement.
